

## Introduction about Rent App

This Rent App is developed with PHP and JavaScript. PHP OOP programming, Session, Ajax, Bootstrap are applied in the development.

1. PHP files introduction:

nav.php : the top navigation part for each page;

footer.php : the bottom footer part for each page;

Index.php : home page;

detail.php : page showing details about each property;

upload.php : page for uploading properties;

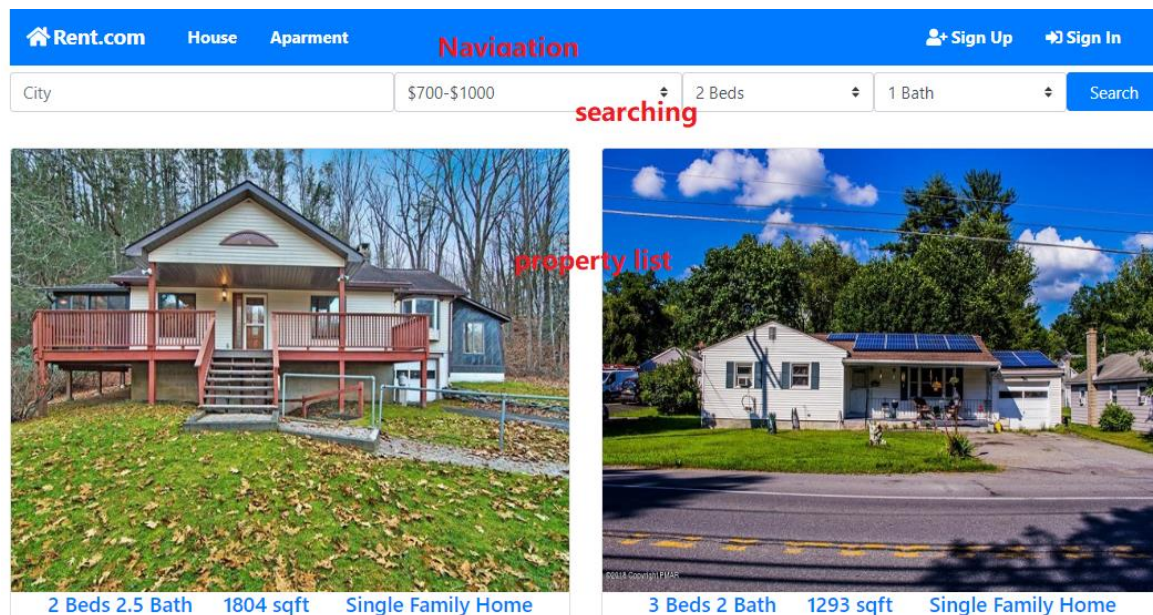

myproperty.php : page for login user to manage their own properties;

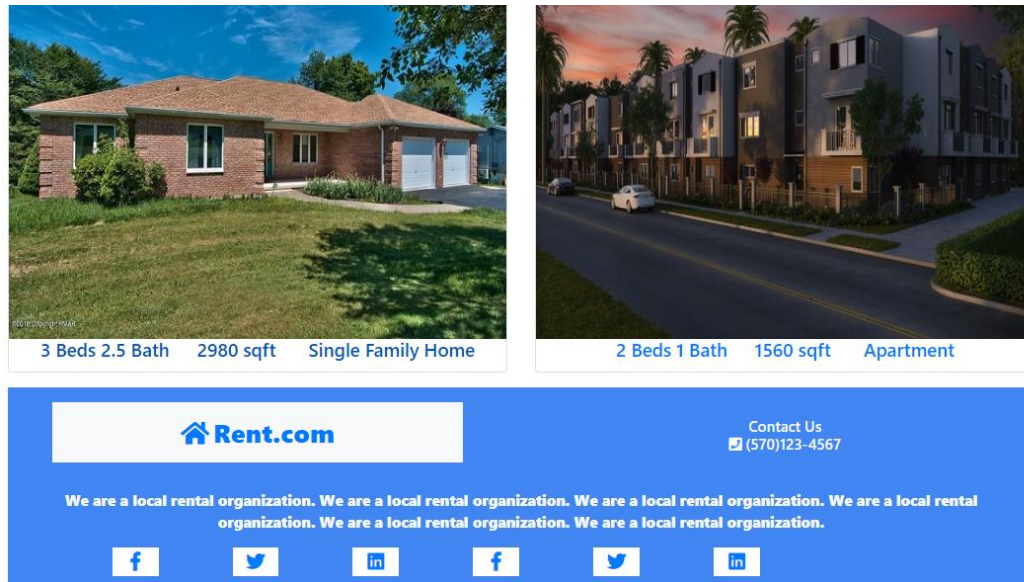

class.php: oop programming for writing pages or access database;

getData.php: manipulate and retrieve data in the backend.

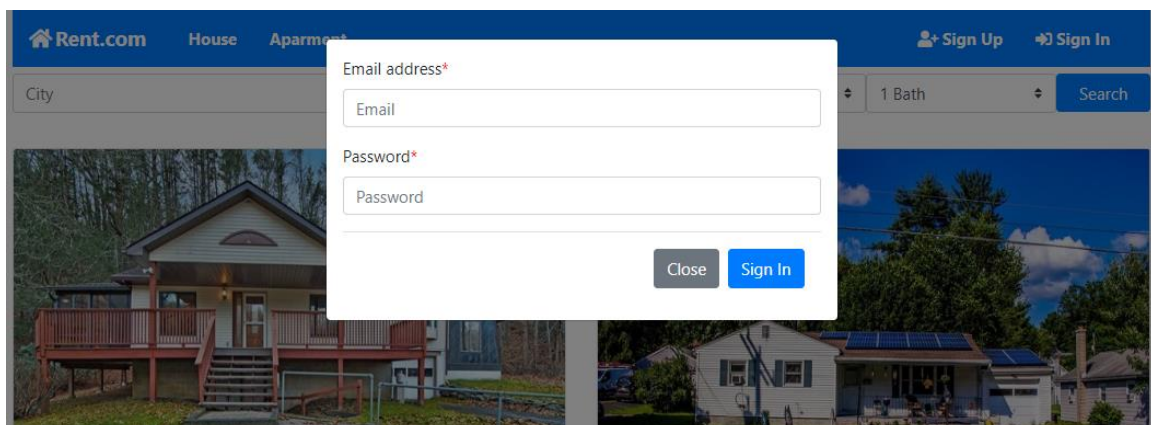

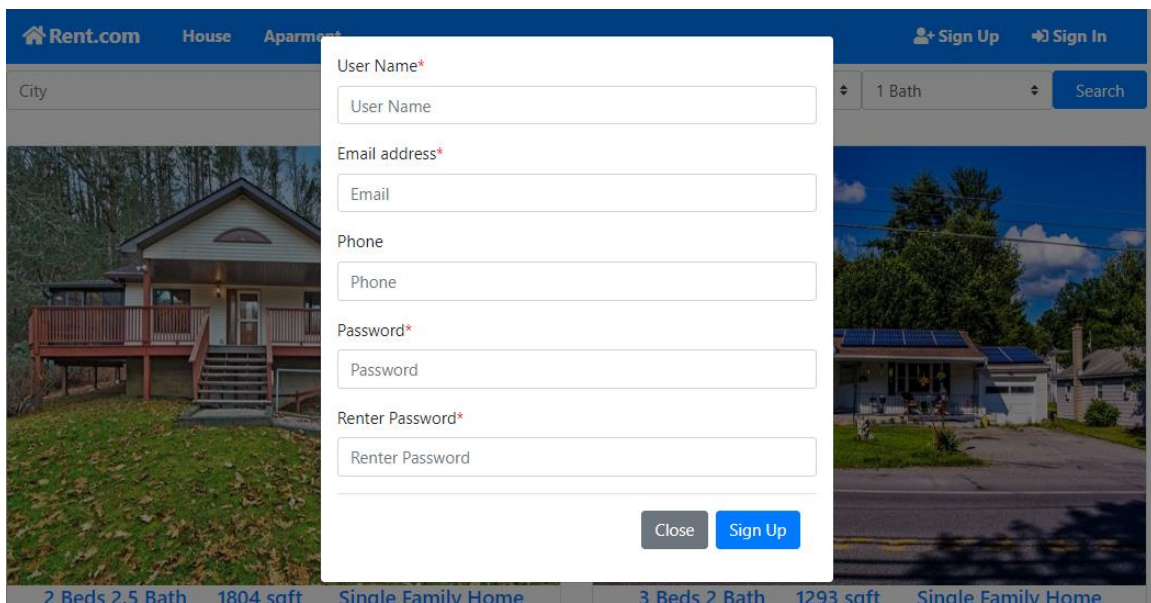

2. Home page

This is a home page layout, including navigation part, searching area, property list area and footer. When clicking on the “House” or “Apartment” button, the relative properties will be listed in the home page. By entering the searching criteria, you can search the properties.

Before logging in, there is a sign up and sign in module.

After signing up or logging in, the sign in model including log-out upload-property and my-properties will show up instead, and the user name will be populate into the log-out tab.
